Bear-Resistant Products Testing Program

CERTIFIED BEAR-RESISTANT PRODUCTS

Methods for Complying with Food Storage Regulations on Public Lands

In order to keep attractants unavailable to bears and reduce human/bear conflicts, regulations pertaining to proper food and attractant storage are likely to be present on public lands within grizzly bear habitat. Use of IGBC-certified bear-resistant containers is one of the methods available to comply with many of these food storage regulations. Other methods for food storage order compliance may also be available; for instance electric fencing is authorized in some ecosystems and under certain conditions. Regardless of your public land location or destination, we recommend contacting local land management offices for more details on the use of electric fences or other products and methods that may be used to comply with applicable food storage regulations because requirements may vary by location.

The products listed below are those that have been approved by the IGBC as bear-resistant. This means these products meet IGBC bear-resistant design and structural standards, but it is not a guarantee that a grizzly bear cannot gain entry into these products. Nor does the IGBC guarantee that small amounts of the contents of the containers won’t be able to leak or spill out. This official list of approved products will be updated as needed. Please note that some approved products may be marketed or sold under different brand names.

Some products on this list do not have assigned certification numbers. Certification numbers are added as new products are approved; however, some products on the list were approved prior to issuance of unique certification numbers. We anticipate assigning certification numbers to those products over time.

We have also begun adding product approval dates as new products are approved. This is intended to provide a general idea of when these products were approved and does not imply anything beyond that. Again, since this is a new practice, not all product approval dates are noted on the list but dates will be added as time and opportunities allow.

*This commercial products list and list of suppliers is for information only and does not imply any endorsement of one product or source over another. Products are generally arranged in alphabetical order.

**Products may be marketed or sold under different brand names.

ELECTRIC FENCES

Portable Electric Fence
The IGBC endorses the portable electric fence standards as described in the USFS’s Missoula Technology and Development Center Technical Note #0723-2305-MTDC entitled, “Specifications for portable electric fence systems as a potential alternative for food storage” as an effective method of “bear-resistant storage” in grizzly bear ecosystems. The IGBC believes this is an adequate and appropriate, temporary food storage. The IGBC recommends going forth with the portable electric fence (as described in the Technical note) for storing food on USFS lands in the Northern Continental Divide Ecosystem (NCDE) and the Greater Yellowstone Ecosystem (GYE) with food storage orders. The IGBC encourages line officers to utilize this new method, as they deem appropriate, and to utilize it under written authorization of line officers to ensure proper use.

This IGBC approval of portable electric fence as specified, does not alter or replace the 7-strand electric fence (MTDC Publication #9923-2321) that has been used in the NCDE since 1999. The 7-strand electric fence is listed as an acceptable food storage method in the food storage order for the NCDE. This fence is not listed as an approved food storage device in the GYE. However, it can be used under special approval by the Forest Supervisor in most forests in the GYE. This fence has applicability in situations such as base outfitter camps with a permitted location on the National Forest or beehives on private land where the fence is typically in place for several days or weeks.

Patriot - Bear & Nuisance Animal Fence Kit (Approved 5/10/16)
Pub# 0723-2305 MTDC
800-874-8494
www.tru-test.com
**Note:** this kit does not contain an energizer to power the electric fence. In order to meet IGBC specifications, an energizer meeting the specifications set forth in Pub# 0723-2305 MTDC must be used with the kit. The kit recommends using either the Stafix/Speedrite AN90 or the Patriot PB12 model energizer and both of these meet IGBC specifications.
